

**Lou MacNarin School had their annual Science Fair February 24! Grades 6 to 8 students were busy all morning, setting up their projects, then presenting to the rest of the Grades K-5 school population as well as to parents and friends of the community.**

**The use of the scientific method is considered a part of the Essential Learnings for middle school science. All of these outcomes are covered by doing one Science Fair project. From formulating hypothesis and major variables, organizing data, identifying different methods of collection and displaying data, to investigating before drawing conclusions, students acquire essential skills through this type of scientific inquiry.
